

## Electroluminescent Lamp Driver Custom Eval Board Request

The selection of the Zywyn EL driver and other components depends on the size, brightness, lifespan and type of EL lamp required.

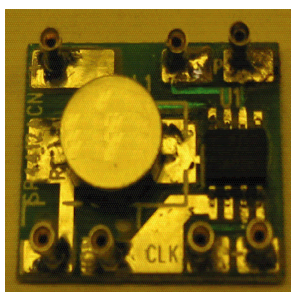

Inductors with an exterior ring or side walls provide higher inductance and lower EMI interference than those without. Inductors should have low DCR values.

Zywyn offers our customers the ability to evaluate our EL Drivers, with the components required to drive their EL Lamps, through our Custom EL Driver Demo Boards. Download request form spreadsheet [HERE](#)
